For example, download a long movie for several hours or download download applications, users have to wait a long time to complete the download process. It wasn't as hard as it used to be. But this is just the problem that happens on computers or laptops. For a phone, this is also a nightmare for many people, when you can't download a file using Chrome, either through a third-party application or by connecting dedicated jacks to laptops or PCs. But from now on, things will be more comfortable with the excellent application – Advanced Download Manager comes from the talented Developer AdvancedApp. Features It can be said that the most affected feature of the Advanced Download Manager application is to download up to 3 files simultaneously on the Internet. At this point, many people can misunderstand how this application works, actually downloading three applications at the same time does not bring results as quickly as many people think. How the download speed operation works is done by dividing a file into up to 9 small parts. This way, the download speed of a file can be downloaded up to 2 or 3 times faster than the average speed. In addition, the application can also get links from browsers, notes or MP4 video links from different websites. Not only that, but the application also works on browsers available for sites that require registration. During the download process, the progress of the operation will be in the table in the notification or may appear transparent when using another application, all of which can be installed and customized in the application. In addition, this application can also measure the download speed of the internet connection data that you are using during the download process. Once the download is complete, the application will automatically notify users by vibrating or notifying the sound. In addition, it is not only limited by the function of downloading data already available on the website, but also seems to be more versatile through the ability to back up the download list and settings on the memory card; Save different types of files to separate folders; Or the most convenient is that you can set the download time when connecting to wifi or available internet networks. This will help reduce the chance of data loss when accidentally putting your phone in a 3G/4G enabled state. Using Advanced Download Manager is quite flexible and easy to understand. First, the browser continues to tap the link address until a Full Action with... and select ADM. That link will now be linked to the application, through the main screen interface, the download link will be at the top of the list. Click Start Download to do this. Now the process of downloading the file will take place, and it is wait until it is completed or increase the download speed if the data file has too large a capacity. Opening the Menu, there will be a function to split the download phase; you can drag it to maximum (9 pieces), increase the number of download files (download file) or increase the download speed. After you complete the previous steps, the only thing you can do is wait while you use other apps. This utility will continue to run in the background, so you won't worry about being interrupted during the download process by updating RAM on your phone (unless you undead multitasking apps and reset RAM). With the download feature in Chrome, you still have the ability to stop downloading, which is very useful when you have to go out or busy with an urgent job without an internet connection, or you don't have to worry too much anymore. The download will be damaged by interruptions. Interface In terms of interface, this Advanced Download Manager application does not need to discuss; it carries an extremely user-friendly interface. Not only can you customize the interface and themes in your settings. AdvancedApp manufacturers know how to change themselves with different interfaces to create an advantage in preventing users from feeling depressed or feeling monotonous while using the application. In addition, the necessary functions are arranged in a very logical way. Users can conveniently use the expertise only through the process of groping and using in minutes.
